

PurplePalette.in: SEO Reverse-Engineering Report

Prepared 8 Oct 2026. Target: <https://www.purplepalette.in/>

Labels used throughout: [FACT] observed directly. [INFERENCE] strongly suggested by the evidence. [HYPOTHESIS] plausible, cannot be verified.

1. Executive Summary

Evidence boundary (read first). [FACT] I fetched 8 pages directly: home, HTML sitemap, /t-shirts, /corporate-t-shirts, /promotional-rain-suits, /market-area, /gurgaon/ and one blog post. I also read about 15 off-site search results. From the site's own HTML sitemap and Market Area hub I mapped roughly 245 URLs, so page-level observation covers about 3% of the site. My tools could not return: Google positions, Ahrefs/Semrush data, robots.txt, sitemap.xml, HTTP status codes or headers, JSON-LD (the fetcher returns rendered text with scripts stripped), or Core Web Vitals. Those items are marked 'Not publicly verifiable'. No rankings are invented anywhere in this report.

What the site is. [FACT] A Hauz Khas, Delhi B2B maker and supplier of custom T-shirts, corporate gifts and printing, on an agency-built CMS (footer credit: Webpulse).

The system in one paragraph. [INFERENCE, High confidence] PurplePalette runs a programmatic keyword matrix. The homepage targets three head terms (T-shirt manufacturers, corporate gifts suppliers, printing services) plus 'in Delhi'. Beneath it sit 95 flat subcategory pages built as [modifier] x [product]. Beside it sit 130 Market Area pages (22 states, 108 cities and localities) that reuse the homepage template with the place name swapped in. Every page follows one skeleton: a keyword-variant title with no brand, a short H1, an '... in Delhi' H2, about 120-160 words of copy with three bolded exact-match phrases, a quote CTA, and sitewide footer links to the main categories. Off-site, the business appears on at least five B2B and local directories.

What I cannot say. [Not publicly verifiable] Whether this system actually ranks, or which competitors it beats. I found no Google SERP data, so any claim that it outranks named rivals would be invented.

Biggest weaknesses observed. Thin and near-duplicate pages at scale (doorway and scaled-content risk), inconsistent business details across listings, a dormant blog with no contextual links to commercial pages, redirecting product URLs, and 70-77 character titles with no brand name.

2. Website Architecture

Home (/)

└─ Utility: /about-us, /gallery, /blog, /contactus, /market-area, /our-products, /pages/sitemap, privacy, return-delivery, terms

└─ T-Shirts (/t-shirts) → 26 subcategories

└─ Corporate Gifts (/corporate-gifts) → 28 subcategories

└─ Printing Services (/printing-services) → 28 subcategories

└─ Uniforms → 3, Rainwear → 3, Hoodies → 3, Sweatshirts → 4

└─ Blog (/blog) → 3 posts seen (2 dated Mar 2020, 1 dated Sep 2026)

└─ Product-detail URLs: name + numeric ID, e.g. /desk-notebook-organiser7030
| (the one tested resolved to its parent category page)

└─ Market Area (/market-area) → 22 state pages + 108 city/locality pages (31 are Delhi localities)

[FACT] Click depth is 2 for subcategories (Home → category → subcategory) and 2 for location pages (Home → footer 'Market Area' → city). URLs are single-segment; hierarchy exists only in breadcrumbs (Home > T-Shirts > Corporate T-Shirts) and in links.

[INFERENCE, High] The model is TOPIC → CATEGORY → SUBCATEGORY → product, with geography as a parallel dimension. There is no pillar-plus-supporting-content layer: the blog is disconnected from the commercial tree.

3. Complete URL Inventory

3a. Pages fetched and observed

URL	Type	Canonical	Title (chars)	H1	Body words (approx)	Notes
/	Home	https://www.purplepalette.in (no slash)	T-Shirts Manufacturers, Corporate Gifts Suppliers, Printing Services in Delhi (77)	One-Stop Destination for Amazing T-Shirts, Corporate Gifts & Printing Services in Delhi	250 plus factsheet	og:type=article, twitter large card
/t-shirts	Category	self	T Shirt Manufacturers in Delhi, T Shirts for Men and Women Suppliers India (74)	T-Shirts	130 plus 4 child cards	Breadcrumb Home > T-Shirts

URL	Type	Canonical	Title (chars)	H1	Body words (approx)	Notes
/corporate-t-shirts	Subcategory	self	Corporate T shirts Manufacturers Delhi, Company Logo T shirts Suppliers India (77)	Corporate T-Shirts	150	3-level breadcrumb, 4 product tiles
/promotional-rain-suits	Subcategory	self	Promotional Rain Suits Manufacturers Delhi, Rain Suits Suppliers India (71)	Promotional Rain Suits	140	Reached by requesting /ladies-rainsuits7135
/gurgaon/	Location	self (trailing slash)	Best T-shirts Manufacturers in Gurgaon, Corporate Gifts Suppliers Gurgaon (73)	One-Stop-Shop for T-shirts, Corporate Gifts & Printing Services in Gurgaon	280 plus factsheet	Homepage template clone
/market-area	Hub	self	Market Area (11)	Market Area	links only	Description and keywords are also just 'Market Area'
/pages/sitemap	HTML sitemap	self	Sitemap :: (10)	Sitemap	links only	Description is 'Sitemap ::'
/corporate-gifting-trends-in-2026-what-companies-are-choosing-for-employees-clients-6	Blog	self	What are the Most Popular Corporate Gifting Ideas (50)	Corporate Gifting Trends in 2026: What Companies Are Choosing for Employees & Clients	430	Title and description do not match the H1

HTTP status is not exposed by my fetcher. Schema, hreflang, robots.txt and sitemap.xml: Not publicly verifiable here. No hreflang metadata was observed on any fetched page.

3b. URL list taken from the site's own sitemap and Market Area page [FACT]

T-SHIRTS (26): personalized-t-shirts, branded-tshirt, corporate-t-shirts, promotional-t-shirts, customized-t-shirts, sublimation-t-shirts, logo-t-shirts, organic-cotton-t-shirts, gym-t-shirts, marathon-t-shirts, sports-t-shirts, election-t-shirts, dry-fit-t-shirts, round-neck-t-shirts, yoga-t-shirts,

digital-printed-t-shirts, designer-t-shirts,
 half-sleeves-t-shirt, collar-t-shirts, full-sleeve-t-shirts, v-neck-t-shirts, hooded-t-shirts, polyester-t-shirt,
 corporate-logo-t-shirts, custom-polo-t-shirts, oversize-t-shirts
 UNIFORMS (3): school-uniforms, corporate-uniform, hotel-uniforms
 RAINWEAR (3): raincoat, windcheaters, promotional-rain-suits
 HOODIES (3): customised-hoodies, corporate-hoodie, promotional-hoodie
 SWEATSHIRTS (4): personalized-sweatshirt, corporate-sweatshirt, promotional-sweatshirt, logo-sweatshirt
 CORPORATE GIFTS (28): sustainable-gifting, trendy-gifts, women-s-day-gifts, work-from-home-gifts, corporate-gift-boxes,
 corporate-food-hamper, promotional-gifts, diwali-gifts, branded-gift, event-gifts, birthday-gifts, business-gifts,
 ceo-gifts, christmas-gifts, client-gifts, client-onboarding-swag-kits, corporate-gift-sets, corporate-wellness-kits,
 custom-promotional-gifts, custom-sales-promotion-gifts, diwali-gifts-hampers, eco-friendly-office-gifts, employee-gifts,
 event-giveaways, gifts-for-men, mother-s-day-gifts, father-s-day-gifts, tech-gifts
 PRINTING SERVICES (28): personalized-sipper-bottles, promotional-tech-gadgets, t-shirts-printing, promotional-mug-printing,
 mug-printing, cap-printing, election-cap-printing, corporate-mug-printing, sipper-bottle-printing, corporate-sipper-printing,
 card-pendrive-printing, promotional-notebook-printing, promotional-keychain-printing, mouse-pad-printing,
 sticky-note-pad-printing, new-year-diary-printing, notebook-printing, table-calendar-printing, laptop-bag-printing,
 branded-laptop-backpack, branded-merchandise, branded-sipper-bottles, custom-printed-sipper, custom-printed-tote-bags,
 custom-travel-mug, customized-laptop-bags, desk-organizers-stationery, personalized-mug
 LOCATIONS (130): 22 state slugs (e.g. /haryana/, /tamil-nadu/) + 108 city slugs (e.g. /gurgaon/, /noida/, /hauz-khas/), all listed on /market-area

Totals [FACT]: 7 category pages, 95 subcategories, 130 location pages, 3 blog posts seen, about 10 utility pages. Product-detail URL count: not determined.

For the ~235 unfetched URLs I did not observe status, title, H1, word count or link counts. Inbound and outbound link counts per page: Not publicly verifiable without a full crawl.

4. Keyword Strategy

[FACT] Every fetched page fills the old meta keywords tag. Google ignores that tag, but it works as the site's own keyword brief and exposes the intended targets. Pattern

[INFERENCE, High]: [product noun] + (Manufacturers / Suppliers / Wholesale) + (Delhi /

India / city). Three buckets: head commercial terms on the homepage, modifier variants on subcategories, and place variants on location pages.

#	Keyword as targeted	Page	Evidence	Confidence
1	t shirt manufacturers in delhi	/ and /t-shirts	Home title, keywords tag, bolded link anchor in home body; /t-shirts title, description, keywords	High
2	corporate gifts suppliers in delhi	/	Home title, bolded in first paragraph, hero image alt	High
3	printing services delhi	/	Home title and keywords tag	High
4	buy corporate gifts online in delhi	/	Bolded in body	Medium
5	corporate gifts wholesale suppliers in delhi	/	Meta description	Medium
6	printed t shirts suppliers india	/	Keywords tag	Medium
7	designing & printing services delhi	/	Keywords tag	Medium
8	corporate t shirts manufacturers delhi	/corporate-t-shirts	Title, keywords, bold in body	High
9	corporate t-shirts suppliers in delhi	/corporate-t-shirts	Bold in body	High
10	company logo t shirts suppliers india	/corporate-t-shirts	Title, description	Medium
11	t shirts for men and women suppliers	/t-shirts	Title	Medium
12	men t shirts suppliers; women t shirts manufacturers in delhi	/t-shirts	Keywords tag	Medium
13	promotional rain suits manufacturers delhi	/promotional-rain-suits	Title, keywords, H2	High

#	Keyword as targeted	Page	Evidence	Confidence
14	rain suits suppliers india; rainsuit wholesaler in delhi	/promotional- rain-suits	Title, keywords	Medium
15	promotional rainwear manufacturers in delhi	/promotional- rain-suits	Bold in body	High
16	t shirt manufacturers in gurgaon	/gurgaon/	Title, keywords, bold	High
17	corporate gifts suppliers gurgaon	/gurgaon/	Title, bold	High
18	corporate printing services in gurgaon	/gurgaon/	Keywords tag	Medium
19	personalized / branded / promotional t-shirts in delhi	Matching subcategories	Anchor titles and card text on /t-shirts (target pages not fetched)	Medium
20	diwali gifts / eco-friendly office gifts / tech gifts in delhi	Matching subcategories	Homepage hero anchor titles	Medium

Also present [INFERENCE, Medium]: seasonal and event terms (Diwali, Christmas, Women's Day, Mother's and Father's Day, Election T-Shirts, Election Cap Printing), and both spellings customized/customised across slugs.

CLAIM: PurplePalette deliberately targets '[product] manufacturers/suppliers in Delhi' as its core commercial pattern. EVIDENCE: the pattern appears in the title, description, keywords tag and bolded body text of all 4 commercial pages fetched (home, /t-shirts, /corporate-t-shirts, /promotional-rain-suits), and is repeated with a city swapped in on /gurgaon/. CONFIDENCE: High.

5. Keyword → URL Mapping

URL	Primary keyword	Secondary keywords	Intent	Keyword location	Evidence
/	t shirt(s) manufacturers + corporate gifts suppliers + printing services (Delhi)	buy corporate gifts online in delhi; corporate gifts manufacturers	Commercial (B2B sourcing)	Title, description, H1, first paragraphs, hero alt, keywords tag	Fetches
/t-shirts	t shirt manufacturers in delhi	t shirts for men and women suppliers; men t shirts suppliers	Commercial, mixed B2B and retail wording	Title, description, H2, bold body, card anchor titles	Fetches
/corporate-t-shirts	corporate t shirts manufacturers delhi	company logo t shirts suppliers india	Commercial (B2B)	Title, description, H2, three bold phrases, tile alt text	Fetches
/promotional-rain-suits	promotional rain suits manufacturers delhi	rain suits suppliers india; rainsuit wholesaler in delhi	Commercial (B2B)	Title, keywords, H2, bold body	Fetches
/gurgaon/	t-shirts manufacturers in gurgaon	corporate gifts suppliers gurgaon; printing services gurgaon	Local- commercial	Title, description, H1, bold body, alt and title attributes	Fetches
/corporate-gifting-trends-in-2026-...-6	none clear	corporate gifting trends 2026 (H1 only)	Informational	H1 and body; not in title tag	Fetches
/market-area, /pages/sitemap	none	none	Navigational	Not optimized	Fetches
Other 100+ category and subcategory URLs	Inferred from slug and anchor titles	Not observed	Commercial	Slug, anchor text	Not fetched

6. Keyword Placement Analysis

Keyword: 'T shirt manufacturers in Delhi' at /t-shirts

☐ URL (slug is /t-shirts, no 'manufacturers', no 'delhi')

- ☒ Title (exact)
- ☒ Meta description (exact, at the start)
- ☐ H1 ('T-Shirts')
- [~] H2 ('T-Shirts in Delhi': product plus place, no 'manufacturers')
- ☒ First paragraph (bold 'T-shirt Manufacturer in Delhi', singular)
- ☒ Body (bold 'T-shirts in Delhi', 'T-shirt suppliers in Delhi')
- ☒ Anchor title attributes on child cards ('Personalized T-shirts in Delhi')
- ☐ Breadcrumb (only 'T-Shirts')
- ☐ FAQ (none on page)
- [?] Schema (Not publicly verifiable)

Keyword: 'Corporate T-shirts manufacturers in Delhi' at /corporate-t-shirts

- [~] URL (corporate-t-shirts)
- ☒ Title, ☒ Meta description
- [~] H1 ('Corporate T-Shirts'), [x] H2 ('Corporate T-Shirts in Delhi')
- ☒ First paragraph (bold), [x] two more bold variants ('suppliers in Delhi', 'Manufacturers in Delhi')
- ☒ Product tile alt and title ('Round Neck tshirt in Delhi')
- ☒ Breadcrumb (Home > T-Shirts > Corporate T-Shirts)
- ☐ FAQ, [?] Schema

Keyword: 'Corporate gifts suppliers in Delhi' at /

- ☐ URL (home), [x] Title, [x] Meta description
- [~] H1 (product terms plus 'in Delhi'), [x] First paragraph (bold), [x] Body ('buy corporate gifts online in Delhi')
- ☒ Hero image alt and title ('Corporate Gifts in Delhi'), [x] Hero link title attribute
- ☐ FAQ, [?] Schema

Observed pattern [FACT]: the geo-modified phrase sits in title, description, H2, bolded body copy and alt/title attributes. The URL slug and the H1 stay as short product nouns on all three category-level pages fetched. Each page carries the phrase in three variants (product + 'in Delhi', + 'suppliers in Delhi', + 'manufacturers in Delhi'), one per short text block.

7. Search Intent Strategy

Page type	Intent targeted	Fit	Note
Home, categories, subcategories	Commercial investigation / B2B transactional (CTAs: Get A Quote, Enquire Now, bulk enquiry shortlist)	Good	Matches 'manufacturers/suppliers' vocabulary
Location pages	Local-commercial	Weak [INFERENCE]	Business is in Delhi; the Gurgaon page admits it is Delhi-based while targeting Gurgaon
Blog	Informational	Mismatch	Title tag targets 'popular gifting ideas', H1 targets '2026 trends'; no path to a quote
/t-shirts	B2B bulk plus consumer wording ('for Men and Women', 'Buy')	Mixed [HYPOTHESIS]	Retail-style modifiers (oversize, yoga, gym, designer) may attract shopper intent that a quote-only page does not satisfy

Keyword intent ≠ page intent candidates: informational queries about gifting trends (blog), consumer queries such as 'oversize t shirts' or 'yoga t shirts' (retail intent, B2B quote page), and 'near me' style local queries from cities where the firm has no premises. These are hypotheses until Search Console data confirms them.

8. Title Tag Strategy

Formula [FACT, 4 of 4 commercial pages]: [Head product] Manufacturers [in] Delhi, [Variant product] Suppliers India. The brand name 'Purple Palette' is absent from every fetched title. The short og:title is just the H1 text (for example 'T-Shirts').

Page	Title	Chars
/	T-Shirts Manufacturers, Corporate Gifts Suppliers, Printing Services in Delhi	77

Page	Title	Chars
/t-shirts	T Shirt Manufacturers in Delhi, T Shirts for Men and Women Suppliers India	74
/corporate-t-shirts	Corporate T shirts Manufacturers Delhi, Company Logo T shirts Suppliers India	77
/promotional-rain-suits	Promotional Rain Suits Manufacturers Delhi, Rain Suits Suppliers India	71
/gurgaon/	Best T-shirts Manufacturers in Gurgaon, Corporate Gifts Suppliers Gurgaon	73

[INFERENCE, High] Titles are built to carry two keyword variants each (singular/plural, manufacturer/supplier, Delhi/India) at the cost of length. At 71-77 characters they will often be truncated in results (the exact cut-off depends on pixel width, not a fixed count). [FACT] No CTR wording, numbers or power words appear; 'Best' appears only on location pages.

9. Meta Description Strategy

[FACT] One description string is copied into meta description, og:description, twitter:description, dc.description and a 'classification' tag. Category and subcategory descriptions follow one template: [product] manufacturers in Delhi, brand name, 'leading ... manufacturers and suppliers', bulk or wholesale price wording, and a closing 'ENQUIRE NOW!'. The homepage description runs roughly 190-200 characters, uses a check-mark glyph and 'Factory Price', and includes the phone number. Category-level descriptions are also long enough to be cut off.

Quirks [FACT]: twitter:description on category pages ends in a stray '>' character; /t-shirts and /corporate-t-shirts both open with the identical phrase 'T Shirt Manufacturers in Delhi', so two pages advertise the same head term [HYPOTHESIS: cannibalization risk]. The blog post's description is the first sentence of body text cut mid-sentence, and its keywords tag is an auto-extracted word list ('items, corporate, gifts, These, branding...'), which indicates a CMS auto-generator rather than hand-written fields.

10. Heading Strategy

[FACT] H1 is the short category noun ('Corporate T-Shirts'). H2 is '[Noun] in Delhi' directly under the breadcrumb. Two or three H3s then name a benefit ('Promote Equality & Unity', 'Get Suitable Designs'). The homepage and location H1s are long and stack three head

terms. No question-style headings or FAQ blocks were observed. The headings form a repeatable template, not a deep semantic outline. On the blog post, the H1 is descriptive and on-topic but disagrees with the title tag.

11. Content Strategy

- [FACT] Subcategory and category copy is 120-160 words, in three blocks, each ending in a bolded exact-match phrase.
- [FACT] The homepage adds a company factsheet table (nature of business, year 2012, employees, legal status, turnover, GST number), a client-logo strip, a 'Why Choose Us' block, and 'Latest Blogs'. This mirrors the profile layout used by B2B marketplaces.
- [FACT] Blog: the three visible posts are dated Mar 2020 (two) and 9 Sep 2026 (one). The 2026 post is a generic list of seven gifting trends with no contextual links to commercial pages in its body.
- [INFERENCE, High] Content is built for breadth, not depth: many narrow pages, little unique information per page (no specs, MOQ, pricing, turnaround, printing-method comparison, or FAQs).
- [FACT] Trust signals present: client logos (CNBC, HSBC, Facebook and others), an award image, 'Established 2012', a GST number. These are self-asserted; I did not verify them.

12. Topical Authority / Topic Clusters

Cluster	Pages	Modifier dimensions seen in slugs
Apparel (T-shirts, uniforms, rainwear, hoodies, sweatshirts)	1+26, 1+3, 1+3, 1+3, 1+4 = 42	Use-case (corporate, promotional, marathon, election, gym, yoga, sports); material (organic cotton, polyester, dry-fit); technique (sublimation, digital printed); style (round neck, v-neck, collar, hooded, half/full sleeve, oversize, polo); intent (personalized, branded, customized, logo, designer)
Gifts	1+28 = 29	Occasion (Diwali, Christmas, Women's/Mother's/Father's Day, birthday); recipient (CEO, client, employee, men); theme (eco-friendly, tech, sustainable, trendy, WFH); format (boxes, sets, hampers, kits, giveaways)

Cluster	Pages	Modifier dimensions seen in slugs
Printing	1+28 = 29	[Product] x printing (mug, cap, notebook, keychain, mouse pad, sipper) x (promotional, corporate, personalized, branded, custom)
Geography	1 hub + 130	State and city, plus Delhi localities
Blog	3	Not connected to clusters

CLAIM: The site builds topical coverage through a modifier x product matrix, not through informational depth. EVIDENCE: 95 subcategory slugs map cleanly onto modifier dimensions; near-duplicate families exist (mug: /mug-printing, /promotional-mug-printing, /corporate-mug-printing, /personalized-mug; sipper bottle: 5 pages; laptop bag: 4 pages; Diwali: /diwali-gifts and /diwali-gifts-hampers); category copy is only 120-160 words. CONFIDENCE: High for the structure; Not publicly verifiable whether Google rewards it.

13. Internal Linking Strategy

- [FACT] Sitewide footer on every fetched page links to Home, Company Profile, Our Products, Gallery, Blog, Contact, three policy pages, Sitemap and Market Area, plus six categories: T-shirts, Corporate Gifts, Printing Services, Uniforms, Rainwear, Hoodies. These categories receive a link from every page.
- [FACT] Homepage hero links five categories: T-Shirts, Corporate Gifts, Diwali Gifts, Eco-Friendly Office Gifts, Tech Gifts. Anchor text is the short name ('T-Shirts'); the geo phrase sits in the title attribute ('T-Shirts in Delhi').
- [FACT] The only contextual exact-match link seen in body copy is 'T-Shirts Manufacturers in Delhi' on the homepage, pointing to /t-shirts. It uses an http and non-www URL, so it depends on a redirect to the canonical host.
- [FACT] On /gurgaon/, the hero and product links point to the same Delhi category pages. Only the title attribute changes ('T-Shirts Manufacturers in Gurgaon'). Visible anchors stay generic.
- [FACT] /pages/sitemap links all 7 categories and 95 subcategories; /market-area links all 130 location pages. These two hubs are the main crawl paths to deep pages. /t-shirts shows only 4 of its 26 children in the fetched grid; the rest may load by pagination or script [HYPOTHESIS].
- [FACT] Breadcrumbs (Home > Category > Subcategory) exist on category and subcategory pages. The blog's 'Popular Post' links point only to other blog posts.
- [FACT] /branded-corporate-gifts is linked from /gurgaon/ as a product but is not in the HTML sitemap list.

Likely money pages [INFERENCE, Medium]: /t-shirts, /corporate-gifts, /printing-services (sitewide footer plus hero), then /diwali-gifts, /eco-friendly-office-gifts, /tech-gifts (hero placement, seasonal and trend products), and /corporate-t-shirts (breadcrumb plus category card). The site does distribute authority deliberately toward the six footer categories. Subcategories rely on one parent link, one sitemap link and breadcrumbs. Exact per-page inbound counts: Not publicly verifiable without a crawl.

14. URL Strategy

- [FACT] Flat, lowercase, hyphenated, single-segment slugs with the keyword in the slug: /corporate-t-shirts, /promotional-rain-suits. Slugs are 10-30 characters. Parent is not in the URL.
- [FACT] No geo in category slugs. Geo pages use a bare place slug with a trailing slash (/gurgaon/); category pages have no trailing slash. The homepage canonical has no trailing slash. Trailing-slash handling is therefore inconsistent.
- [FACT] Location slug style is inconsistent: /madhyapradesh/, /uttarpradesh/, /dlfcity/, /sohnaroad/ are run together; /tamil-nadu/, /himachal-pradesh/, /west-bengal/ are hyphenated.
- [FACT] Singular/plural is mixed: branded-tshirt, half-sleeves-t-shirt and polyester-t-shirt versus most others plural. Both customized and customised spellings are used.
- [FACT] Product URLs are name plus numeric ID (/desk-notebook-organiser7030, /rain-coat117145). Apostrophes become '-s-' (/orange-and-black-men-s-polyester-t-shirt). The product URL I requested returned the parent category page with a different final URL, so product URLs act as aliases of category pages in that case.
- [FACT] Blog slug is the full headline plus '-6' (about 85 characters). The same '-6' suffix appears on the older posts and matches the 'member_6' path used for uploaded images, which suggests a multi-tenant CMS ID [INFERENCE, Medium].
- [INFERENCE, High] The slugs are keyword-driven, but the keyword matrix is built from product and modifier words, with the place term supplied by title, H2 and body rather than the URL. Parameters: none observed.

15. Technical SEO

- Platform: [FACT] the footer credits Webpulse, a web design and digital marketing agency. Theme and upload paths are /assets/designer/themes/default/template1/ and /uploaded-files/thumb-cache/member_6/. [INFERENCE, Medium] This is an agency-owned multi-tenant CMS, not WordPress (no wp-content paths), Shopify or a JavaScript framework app. Server, CDN, analytics, tag manager and SEO plugin: Not publicly verifiable.

- Host and canonicals: [FACT] canonical host is https://www; every fetched page carries a self-referencing canonical. The one exception is the product URL I requested, which resolved to and canonicalised to its parent category.
- Robots: [FACT] meta robots is 'index, follow' on all pages, repeated in googlebot, a Yahoo Seeker tag and 'allow search' tags.
- Obsolete or ignored tags: [FACT] revisit-after, expires: never, distribution, document-rating, document-type, rating, classification, abstract, meta keywords, Dublin Core (dc.*), plus empty City, State and generator fields. This is automated, templated output.
- Open Graph and Twitter: [FACT] og:type is 'article' on every page, including home and categories ('website' would be the correct type). og:image is the logo and declares 450x450, while its file name indicates a 200 px thumbnail.
- Page noise: [FACT] the quote-form modal embedded in every category and product page includes a country dropdown of about 230 entries in the HTML.
- Images: [FACT] on-the-fly thumbnail URLs (thumb-WxH-name), PNG and JPG; no WebP or AVIF in any URL observed.
- Rendering: [HYPOTHESIS] some tiles load by script (a 'Loader' graphic is present), but product tiles did appear in the fetched text, so at least part of the grid is server-delivered.
- Link defects: [FACT] the footer LinkedIn link points to a company /admin/ URL; the Instagram link carries an igshid tracking parameter; a homepage body link uses http and a non-www host.
- Not publicly verifiable: robots.txt, XML sitemap (the site publishes an HTML sitemap; an XML one was not retrievable), status codes, redirects beyond the one seen, TTFB, Core Web Vitals, pagination behaviour, orphan pages, hreflang (none seen in metadata).

16. Schema Strategy

Not publicly verifiable. My fetcher returns rendered text and drops script tags, so JSON-LD cannot be listed for any page. What can be said:

- [FACT] Visible elements that normally map to schema exist: a breadcrumb trail on category and subcategory pages (BreadcrumbList), company name, address, phone, logo and social links (Organization or LocalBusiness), and a product tile grid with no prices (Product and Offer would not qualify without price data).
- [FACT] No FAQ blocks and no visible review widgets were seen, so FAQPage and AggregateRating would not match visible content.

- Test to run: Google Rich Results Test and the Schema Markup Validator on /, /t-shirts, one subcategory and one location page.
- Mistakes to watch for: AggregateRating without visible reviews (the homepage claim '99% Satisfied Customers' must not be marked up), and a single Organization block copied to 130 location pages.
- Schema's role: it can change how a result looks (breadcrumb path, business details); it is not shown here to raise rankings.

17. Image SEO

- [FACT] File names are descriptive plus a random 4-character suffix (awardb7ue.jpg, t-shirtspxdz.jpg, corporate-giftsk858.jpg).
- [FACT] Alt text and title attributes are the same string. Hero and product images carry 'in Delhi' ('Corporate Gifts in Delhi'). On /gurgaon/ the same image files carry 'Manufacturers in Gurgaon' text, including nonsensical combinations such as 'Rain Coat11 Manufacturers in Gurgaon' and 'JBL 520 BT HEADPHONE Manufacturers in Gurgaon'.
- [FACT] Product names leak internal labels ('promotional rainsuit3', 'Desk Organiser3'). Client logos use bare lowercase tokens ('cris', 'dlf') as alt text. No captions were seen.
- [FACT] Sizes are generated per slot (850x375 blog banner, 250x250 category image, 175x100 client logos).
- [INFERENCE, Medium] Images are used as keyword carriers (alt and title) more than as Google Images assets. Product, image-sitemap and local-image optimisation: weak or Not publicly verifiable.

18. Indexation Strategy

- [FACT] All fetched pages declare index, follow and a self-canonical. Discovery is routed through two hub pages (/pages/sitemap and /market-area).
- [FACT] About 225 of the ~245 known URLs (95 subcategories + 130 locations) are template-driven.
- [HYPOTHESIS] Google may index only part of the location and subcategory set. The Search Console checks that would show it: 'Crawled - currently not indexed', 'Duplicate without user-selected canonical', and 'Alternate page with proper canonical tag' counts.
- Policy note: location pages that differ only by a swapped place name sit close to Google's published guidance on doorway pages and scaled content. That describes the risk, not a finding that the site was penalised; index status is Not publicly verifiable.

19. SERP Strategy

- [FACT] Titles are keyword-first and brand-free; the homepage description adds a check-mark glyph, 'Factory Price' and a phone number; category descriptions close with 'ENQUIRE NOW!'.
- [INFERENCE, Medium] The SERP play is to match supplier-sourcing queries, not to win on brand.
- [FACT] In my search-tool results for the brand name, the first results were third-party listings (IndiaMART, JustDial, TradeIndia, ExportersIndia, Sulekha, TextileInfoMedia) and the company's own homepage. [INFERENCE, Low] The business occupies several brand-query slots through directories.
- Google positions, snippets, People Also Ask, local pack, image and shopping features: Not publicly verifiable. My search tool is not Google and returned no ranking data for PurplePalette on any non-brand keyword.

20. Competitor Analysis

These are co-appearing sites from my search tool, not confirmed Google SERP competitors.

Competitor	Evidence found	Observed approach	Confidence
UniGifts (unigifts.in)	A search for 'corporate gifts suppliers in Delhi' returned about 7 pages repeating that phrase on notion.site, noti.st and a docs host, each naming the brand	Repeated exact-match phrase across third-party hosted pages [FACT]; deliberate off-site syndication for SEO [HYPOTHESIS]	Medium for the pages, Low for intent
TextileInfoMedia directory sellers (Amihart, Garmate and others)	Many listings share the same 'Best T Shirt Manufacturers In Delhi' template wording	Directory-listing saturation of 'T shirt manufacturers Delhi' [FACT]; each seller is a listing, not a site	High
IndiaMART, JustDial, TradeIndia, ExportersIndia, Sulekha	Listings for PurplePalette itself	Marketplace pages that may rank for the same queries as PurplePalette's own pages [HYPOTHESIS]	Medium

What PurplePalette appears to do differently [INFERENCE, Medium]: it owns a large first-party page set (about 245 URLs) that covers modifiers and places on its own domain, where the competitors found rely on third-party hosts or listings. Whether that wins any position: Not publicly verifiable. Per-competitor ranking keywords, backlinks and authority metrics: Not publicly verifiable.

21. Backlink / Off-Page Analysis

No backlink tool or API was available. Listing existence below is [FACT] from search results; whether each listing carries a followed link to purplepalette.in is Not publicly verifiable.

Referring domain	Target URL	Anchor	Link type	Evidence	Confidence
indiamart.com	Company profile and product catalog	Brand name	B2B directory profile	Profile page with factsheet, T-shirt printing and corporate gift catalog	Listing High; link Not verified

Referring domain	Target URL	Anchor	Link type	Evidence	Confidence
justdial.com	Hauz Khas listing	Brand name	Local directory	Listing with rating shown in the snippet	Listing High; link Not verified
tradeindia.com	Corporate gift products catalog	Brand name	B2B directory	Catalog of 28 products with MOQ and price	Listing High; link Not verified
exportersindia.com	About-us profile	Brand name	B2B directory	Profile with category tree	Listing High; link Not verified
sulekha.com	Hauz Khas listing	Brand name	Local directory	Service list and hours	Listing High; link Not verified
textileinfomedia.com	/purple-palette	Brand name	Textile B2B directory	Company factsheet	Listing High; link Not verified
corporategiftingideaz.com	Profile and catalog pages	Brand name	Third-party catalog site, owner unknown	Pages list PurplePalette products	Listing High; relationship Not publicly verifiable
merchprint.in	Home page	Brand name	Unknown	Page presents Purple Palette as a Hauz Khas gift shop	Low [HYPOTHESIS: sister site, affiliate or copied text]
facebook.com, instagram.com, linkedin.com	Company profiles	Brand name	Social profiles	Linked from the site footer	High (outbound only)

Not publicly verifiable: referring-domain count, anchor distribution, guest posts, PR mentions, educational or local links, authority scores.

NAP consistency check [FACT, from public listings]:

Field	Own site	IndiaMART	JustDial
Address	39 Daryacha Building, Hauz Khas Village	UG-16, First Floor, Daryacha Building	UG-18-19, Daryacha Building
Phone	+91-8010222333	08046066905	07383218450
Legal status	LLP	Partnership	Not stated
Employees	0-10	11-25	10-100
Turnover	Rs 50 Lakh - 1 Crore	Rs 1.5 - 5 Crore	Not stated

Field	Own site	IndiaMART	JustDial
Nature of business	Manufacturers	Trader, Wholesaler/Distributor	Corporate gift manufacturers

[HYPOTHESIS] The differing phone numbers may be marketplace-assigned call-tracking numbers. The address, legal-status, size and turnover differences are inconsistencies a local-SEO audit would flag.

22. Ranking Pattern Analysis

Not computable from this dataset. A ranking pattern needs per-page position data (Search Console or a rank tracker) across pages that differ in the variable studied. I have neither, and the observed pages share one template, so there is little variation to compare. I will not claim that pages with property X rank better.

Method to run it yourself once you have data: export Search Console pages and queries for 90 days, join with a crawl (word count, title length, inbound internal links, template type, indexability), then compare median position and CTR by group, for example location pages against subcategories, and pages with 3+ internal inbound links against pages with 1. Report medians with sample sizes, and label results as correlations.

23. SEO Strengths

1. [FACT] Clear commercial vocabulary (manufacturers, suppliers, wholesale) repeated consistently across every page.
2. [FACT] A clean three-level taxonomy with a modifier matrix covering use-case, material, technique, style and occasion.
3. [FACT] Short keyword-bearing slugs, one per topic, with no parameters observed.
4. [FACT] Sitewide footer links push all main categories from every page; breadcrumbs on category and subcategory pages.
5. [FACT] Two crawlable hub pages (HTML sitemap, Market Area) expose every deep URL.
6. [FACT] Self-referencing canonicals on every fetched page; HTTPS; viewport tag.
7. [FACT] Quote CTA and a RFQ-style flow on every page, and a factsheet and client logos for B2B trust.
8. [FACT] Third-party listings on at least six directories that echo the business's products.
9. [INFERENCE] Seasonal and event pages (Diwali, Election, Christmas) timed to demand spikes.

10. [FACT] A recent blog post exists (Sep 2026), showing the CMS blog is still in use.

24. SEO Weaknesses

1. [FACT] Pages are thin (120-160 words) with no specs, pricing, MOQ, turnaround or FAQs.
2. [FACT, n=1] The Gurgaon page reuses the homepage template, factsheet, client strip and blog block; 130 such pages is a scaled-content risk [HYPOTHESIS on the other 129].
3. [FACT] Titles 71-77 characters with no brand; /t-shirts and /corporate-t-shirts open their descriptions with the same head term.
4. [FACT] Near-duplicate subcategory families (mug, sipper, laptop bag, Diwali) likely compete for the same query [HYPOTHESIS].
5. [FACT] Blog title and description do not match the H1; blog posts carry no contextual links to commercial pages; only one post since 2020 is visible.
6. [FACT] Product URLs alias to category pages; one product link target (/branded-corporate-gifts) is absent from the HTML sitemap list.
7. [FACT] Inconsistent trailing slashes, singular/plural slugs and run-together location slugs.
8. [FACT] Image alt and title text is keyword-stuffed, including nonsensical combinations.
9. [FACT] Obsolete meta tags, og:type article everywhere, and a broken LinkedIn admin link.
10. [FACT] Business facts disagree across listings (address, size, turnover, legal status).
11. [FACT] Utility hubs have no meaningful title or description ('Market Area', 'Sitemap ::').

25. Replicable SEO Strategy

Top techniques they appear to use [INFERENCE unless noted]: (1) head term plus place in title and body; (2) modifier x product page generation; (3) a keyword brief stored in meta keywords; (4) three bolded exact-match variants per page; (5) geo-modified alt and title attributes; (6) footer link block to money categories; (7) HTML sitemap and Market Area hub pages as crawl paths; (8) place-name cloning of the homepage; (9) marketplace and directory listings; (10) seasonal and event pages.

Top things to replicate:

1. A per-page keyword brief (primary, 2-3 secondary, intent, template).
2. A modifier x product matrix, but only for combinations that deserve a distinct page.
3. Short, flat, keyword-bearing slugs with one consistent trailing-slash rule.
4. Footer and breadcrumb links to the money categories.

5. A crawlable HTML sitemap hub.
6. Visible quote CTA on every commercial page.
7. Clear, consistent B2B factsheet and trust block.
8. Marketplace listings with identical NAP.
9. Seasonal pages published ahead of demand.
10. Self-referencing canonicals on every URL.

Top things not to copy:

1. Cloned location pages with only the place swapped.
2. Brand-free, over-length titles.
3. Meta keywords and obsolete tags.
4. Keyword-stuffed or nonsensical alt text.
5. About 120-word category pages.
6. Near-duplicate sibling pages for one query.
7. Product URLs that redirect or canonicalise to category pages.
8. Inconsistent NAP and business facts across listings.
9. Geo phrases in title attributes that point to non-geo pages.
10. Unverifiable claims such as '99% satisfied customers' and award images without proof.

Top 20 pages by SEO importance [INFERENCE, Medium]: /, /t-shirts, /corporate-gifts, /printing-services, /corporate-t-shirts, /personalized-t-shirts, /promotional-t-shirts, /branded-tshirt, /customized-t-shirts, /diwali-gifts, /diwali-gifts-hampers, /eco-friendly-office-gifts, /tech-gifts, /corporate-gift-sets, /employee-gifts, /uniforms, /rainwear, /hoodies, /gurgaon/, /noida/. Basis: sitewide footer links, hero placement, head-term slugs and place in the sitemap hubs. No traffic data was available.

Top clusters: corporate and promotional T-shirts; occasion-based corporate gifts; promotional printed merchandise; city-level supplier pages.

Top internal-link patterns: sitewide footer, hero links, breadcrumbs, HTML sitemap, Market Area hub, 'Read More' card links.

Top technical patterns: self-canonical, flat slugs, thumbnail cache, templated meta, agency CMS.

Top off-page patterns: B2B marketplace profiles, local directories, social profile links, possible third-party catalog sites.

26. SEO Implementation Playbook

Each step is marked [Replicate] where the site does it, or [Improve on] where I suggest a better version.

1. Keyword research [Replicate]: list product nouns, buyer modifiers, places and occasions; add supplier vocabulary (manufacturer, supplier, wholesale, bulk).
2. Clustering [Replicate]: group by dimension (use-case, material, technique, style, occasion, recipient); merge near-synonyms into one page [Improve on].
3. Page mapping [Replicate]: one primary keyword per URL, recorded with secondaries and intent.
4. URLs [Replicate]: flat, lowercase, hyphenated; [Improve on] one trailing-slash rule, consistent plural form, no run-together words.
5. Titles [Replicate]: product + manufacturer/supplier + place; [Improve on] 50-60 characters, brand at the end.
6. Meta descriptions [Replicate]: benefit, CTA, proof; [Improve on] 140-155 characters, unique per page.
7. H1/H2 [Replicate]: H1 as the product noun, H2 for the qualifier; [Improve on] H2s that answer buyer questions.
8. Content [Improve on]: 400+ words per commercial page with MOQ, printing or fabric options, turnaround, sample policy, price drivers and 4-6 FAQs.
9. Internal links [Replicate]: footer to money pages, breadcrumbs, parent-child cards; [Improve on] contextual links with varied descriptive anchors from blog posts and siblings.
10. Schema [Improve on]: Organization or LocalBusiness, BreadcrumbList, FAQPage only where FAQs are visible.
11. Image SEO [Improve on]: descriptive file names without random suffixes, one honest alt per image, WebP or AVIF, explicit dimensions.
12. Technical [Replicate]: HTTPS, self-canonicals; [Improve on] XML sitemap, robots.txt, redirect hygiene, no alias URLs, Core Web Vitals monitoring.
13. Backlinks [Replicate]: marketplace and local directories with identical NAP; add industry, supplier and client-case links.
14. Publishing [Improve on]: ship pages in priority order; make location pages only for places actually served, each with unique local content.
15. Updating [Improve on]: quarterly refresh for money pages; seasonal pages updated 8 weeks before the season.
16. Monitoring [Improve on]: Search Console queries by page and template, index coverage, and an inbound-link count per page.

Templates (variables in braces):

CATEGORY PAGE

URL: /{category}
 Title: {Product} Manufacturers & Suppliers in {City} | {Brand} (<=60 chars)
 Meta: {Benefit}. {MOQ/turnaround}. {CTA}. (140-155 chars)
 H1: {Product}
 H2s: Types of {product}; Fabric and print options; How ordering works; Pricing factors; FAQs
 Links: child subcategories, 2-3 sibling categories, one blog guide, breadcrumb
 Schema: BreadcrumbList, Organization, FAQPage (if FAQs visible)
 Images: descriptive file names, unique alt per image

PRODUCT / SERVICE PAGE

URL: /{modifier}-{product}
 Title: {Modifier} {Product} Manufacturer in {City} | {Brand}
 H1: {Modifier} {Product}
 Body: description, features, benefits, specs, MOQ, turnaround, 4-6 FAQs
 Links: parent category, 3 sibling pages, related blog post
 Schema: BreadcrumbList, Service or Product (only with real offer data)

BLOG PAGE

URL: /blog/{topic-slug}
 Title: {Question or guide} ({year}) | {Brand}
 H1: matches the title intent
 Body: intro with answer, H2 per sub-question, entities, 3+ contextual links to money pages
 Schema: Article, BreadcrumbList, FAQPage (if visible)

27. 30/60/90-Day Action Plan

Days 1-30: write the keyword-to-URL map; fix technical basics (XML sitemap, robots.txt, canonical host, redirects, one trailing-slash rule); publish 7 category pages and 20 priority subcategory pages with 400+ words and FAQs; verify Search Console and GA4 with a quote-form conversion event; claim marketplace listings with identical NAP.

Days 31-60: publish the remaining subcategories that earn their own page; add schema and image fixes; write 4 buyer guides that link to money pages; publish seasonal pages; add 3-5 local pages for places actually served.

Days 61-90: review Search Console for impressions without clicks and cannibalization; merge or redirect near-duplicate pages; add inbound-link targets (clients, suppliers, industry bodies); refresh the top 10 pages; run the ranking-pattern analysis from section

22 on your own data.

28. Final Reverse-Engineered SEO Model

SEO INPUTS (head terms x modifiers x places x occasions; supplier vocabulary)

↓

Technical foundation: HTTPS www, self-canonical, templated meta, thumbnail cache, agency CMS

↓

Keyword targeting: meta keywords brief; title with two variants; 3 bolded phrases per page

↓

Page architecture: 7 categories, 95 subcategories (flat slugs), 130 place pages, 3 blog posts

↓

Content creation: 120-160 word templated copy; homepage-clone place pages; factsheet and client strip

↓

Internal linking: sitewide footer, hero, breadcrumbs, HTML sitemap, Market Area hub

↓

Topical authority: breadth through modifier matrix; no depth layer

↓

External authority: marketplace and local directories; social profiles; Not publicly verifiable beyond that

↓

SERP optimisation: keyword-first titles, CTA descriptions; no brand in titles

↓

Indexation: index,follow everywhere; discovery through hub pages; scaled-content risk

↓

Ranking outcomes: Not publicly verifiable

29. Evidence & Limitations

- Directly observed: 8 PurplePalette pages (full rendered text and meta tags) plus the site's own sitemap and Market Area link lists.
- Off-site: about 15 search results (directory pages and competitor pages). My search tool is not Google, and it gave no ranking positions.
- Not obtainable: robots.txt and sitemap.xml (the fetcher refuses URLs not already surfaced), HTTP headers and status codes, JSON-LD, Core Web Vitals, backlink indexes, Search Console or Analytics data, a full crawl.

- Sampling caveat: location-page conclusions rest on one page (/gurgaon/). Category conclusions rest on three pages. A full crawl could change counts and templates.
- Business details in the NAP table come from public listings and may be out of date.
- Confidence: High for template, taxonomy and metadata patterns on fetched pages; Medium for inferred strategy; Low for anything about rankings, competitor intent or off-site links.

PURPLEPALETTE SEO BLUEPRINT

KEYWORD DISCOVERY: take three supplier head terms (T-shirts, corporate gifts, printing) and attach buyer words (manufacturers, suppliers, wholesale), a place (Delhi, India) and a list of modifiers.

PAGE CREATION: give each modifier-product pair its own flat URL, and add a place page for each target city.

ON-PAGE OPTIMISATION: the title carries two keyword variants, the H1 is the short noun, the H2 adds 'in Delhi', and three bolded exact-match phrases sit in short body blocks.

CONTENT: short templated copy plus a factsheet and client logos; the blog sits apart.

INTERNAL LINKS: a sitewide footer pushes the main categories; breadcrumbs, a hero strip, an HTML sitemap and a Market Area hub reach the rest.

TECHNICAL SEO: self-canonical URLs on HTTPS, templated meta, resized thumbnails, an agency CMS.

AUTHORITY: marketplace and directory profiles repeat the business name and products; other link types Not publicly verifiable.

SERP OPTIMISATION: keyword-first titles, CTA descriptions with a check mark and a phone number.

RANKING: Not publicly verifiable. The pattern is wide coverage of long-tail supplier queries on one domain; whether it works depends on index status and query data you will need from Search Console.

HOW TO IMPLEMENT THIS ON MY WEBSITE

These steps assume Next.js (App Router, version 15 or later) as the front end, with your Express and MongoDB API behind it. A client-only React SPA (Create React App or plain Vite) is a poor base for this strategy because titles, canonicals and content must be in the HTML response.

1. Rendering. Use server rendering or static generation with incremental regeneration for all commercial and blog routes. Keep the Express API for forms, admin and data. Serve the sitemap and robots from Next.js, not Express.

2. Content model (MongoDB).

```
// Page document
{ slug, template: 'category' | 'subcategory' | 'location' | 'blog',
  parentSlug, primaryKeyword, secondaryKeywords: [], intent,
  seo: { title, description }, h1, blocks: [], faq: [{ q, a }],
  relatedSlugs: [], indexable: true, updatedAt }
```

This collection is your keyword map: one primary keyword per slug. Add a unique index on primaryKeyword to block accidental duplicates.

3. Dynamic metadata and canonicals.

```
// app/[slug]/page.tsx
import type { Metadata } from 'next';

export async function generateMetadata(
  { params }: { params: Promise<{ slug: string }> }
): Promise<Metadata> {
  const { slug } = await params;
  const page = await getPage(slug);
  if (!page) return {};
  const url = 'https://www.example.com/' + page.slug;
  return {
    title: page.seo.title,
    description: page.seo.description,
    alternates: { canonical: url },
    robots: { index: page.indexable, follow: true },
    openGraph: { title: page.seo.title, description: page.seo.description,
url, type: 'website' },
  };
}
```

4. Sitemap and robots.

```
// app/sitemap.ts
import type { MetadataRoute } from 'next';
export default async function sitemap(): Promise<MetadataRoute.Sitemap> {
  const pages = await Page.find({ indexable: true }).select('slug
updatedAt').lean();
  return pages.map(p => ({ url: 'https://www.example.com/' + p.slug,
lastModified: p.updatedAt }));
}

// app/robots.ts
export default function robots() {
  return {
    rules: [{ userAgent: '*', allow: '/', disallow: ['/api/', '/admin/'] }],
    sitemap: 'https://www.example.com/sitemap.xml',
  };
}
```

Use generateSitemaps to split files if you pass 50,000 URLs, and list only indexable pages.

5. Host and URL rules. Redirect http to https and non-www to www in next.config redirects or at the proxy. Pick one trailing-slash rule and set trailingSlash accordingly. Return 404 or a single 301 for removed pages; never serve the same content on an alias URL.

6. Schema. Build a small JsonLd component that renders a script tag of type application/ld+json from a plain object. Generate BreadcrumbList from the parentSlug chain, Organization or LocalBusiness once in the layout, and FAQPage only from the visible faq array. Validate with the Rich Results Test in CI or before release.

7. Internal linking. Compute links from data: breadcrumbs from parentSlug; 'related' cards from relatedSlugs; a footer block with your 5-7 money categories; contextual links in blog bodies stored as slug references (rendered with descriptive, varied anchors). Add a build-time script that reports pages with fewer than 3 inbound internal links and any orphan slugs.

8. Content architecture and keyword mapping. Create categories, subcategories and a blog cluster per category. Gate programmatic pages: set indexable to false for any page under about 300 unique words or more than about 80% similar to a sibling, until it has real content.

9. Page templates. Implement the three templates from section 26 as React components fed by the Page document, so title length, H1, FAQ and schema are produced consistently.

10. Images. Use next/image with explicit sizes, WebP or AVIF, descriptive file names and one honest alt per image.

11. Analytics. Add GA4 and send a conversion event on quote-form submit and WhatsApp clicks, with the page template as an event parameter.

12. Google Search Console and monitoring. Verify a Domain property, submit the sitemap, and pull the Search Analytics API weekly into MongoDB by page and query. Track average position, impressions and CTR per template, index-coverage statuses, and Core Web Vitals. Add a CI check for title length, duplicate titles and duplicate primary keywords.

Do not copy PurplePalette's text. Reuse the structure (keyword brief per page, modifier matrix, hubs, footer money links) and write original content for every page you publish.
